### **DETAILED ACTION**

Receipt is acknowledged of the Remarks filed 12 March 2004.

#### ***Response to Arguments***

Applicant's arguments, see pages 2-3, filed 12 March 2004, with respect to claims 1 and 2 have been fully considered and are persuasive. The rejection of claims 1 and 2 has been withdrawn.

#### ***Allowable Subject Matter***

Claims 1 and 2 are allowed over the prior art.

The following is an examiner's statement of reasons for allowance: The best prior art of record discloses a color display device comprising a substrate, a phosphor pattern, containing blue phosphors for emitting, formed on the substrate, and at least a blue color filter extending between the phosphor and the substrate. The prior art further discloses a color display device comprising a substrate, a phosphor pattern, containing blue phosphors for emitting, formed on the substrate wherein the phosphors comprise phosphor particles provided with blue pigment. However, the prior art fails to teach or fairly suggest the combination of these to embodiments to form a color display device comprising a substrate, a phosphor pattern, containing blue phosphors for emitting, with at least a blue color filter layer extending between the blue phosphor and the substrate, characterized in that the blue phosphors comprises phosphor particles provided with blue pigment as claimed in claim 1. Claim 2 is allowed by virtue of its dependency.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

### ***Conclusion***

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

- US Patents 5,952,776 and 6,517,741 disclose the substitution of pigmented phosphors for the phosphor/color filter combination in a color display device.
